DETAILED ACTION

DETAILED ACTION

1. Claims 2 and 4 are objected to as being of improper form for product claims. Claims 2 and 4 contain language that would limit the manufacturing steps of the product but do not further structurally limit the product claimed in the instant invention. Therefore, these claims are improper product claims as they depend from a product claim.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being obvious over Krajcir et al. 4,908,963. Krajcir et al. '963 discloses substantially all the limitations as claimed including the following: a boot (see Figure 1) with an outer layer of leather (see col. 2, lines 20-23) stretched over a toe box (see col. 2, lines 20-23); a layer of insulating material secured to the inside of the toe box (see col. 2, lines 23-39); an outsole 5. Krajcir et al. '963 does not specifically state the thickness of the insulating layer. The thickness of the insulating layer would depend upon the amount of heat or insulation desired by the user and therefore would require only routine testing and optimization of one of ordinary skill in the art to find the thickness of the insulation layer necessary to provide the desired insulation and interior foot temperature. With respect to the cold insulating material not being compressed during the manufacturing process, this is a desired intended use and does not further limit the product claim by

structurally defining the instant application over that of the prior art. Therefore, it would have been obvious to make the thickness of the insulating layer as thick as necessary to gain the desired temperature of the interior of the shoe to protect the user's foot from prolonged exposure to inclement cold weather.

3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being obvious over Mitchell 2001/0007179. Mitchell '179 discloses substantially all the limitations as claimed including the following: a boot (see Figure 4) with an outer layer of leather (see paragraph [0013]) stretched over a toe box (stretched over steel toe defining the toe box); a layer of insulating material secured to the inside of the toe box (10); an outsole (12). Mitchell '179 does not specifically state the thickness of the insulating layer. The thickness of the insulating layer would depend upon the amount of heat or insulation desired by the user and therefore would require only routine testing and optimization of one of ordinary skill in the art to find the thickness of the insulation layer necessary to provide the desired insulation and interior foot temperature. With respect to the cold insulating material not being compressed during the manufacturing process, this is a desired intended use and does not further limit the product claim by structurally defining the instant application over that of the prior art. Therefore, it would have been obvious to make the thickness of the insulating layer as thick as necessary to gain the desired temperature of the interior of the shoe to protect the user's foot from prolonged exposure to inclement cold weather.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure and are cited on form 892 enclosed herewith.

Telephone inquiries regarding the status of applications or other general questions, by persons entitled to the information, "should be directed to the group clerical personnel and not to the examiners.
